

## Folding crystal glass windows

The firm SAP srl, with its different system meeting any requirement in the field of the realization of glass facades and window frames, offers complete facades, partitions, reticular structures.

The building used for work, sport, commercial and social activities, present many functional and architectural requirements. The many possible utilizations of our wooden facades and door frames, make them meet all these requirements: from the very simple frame to a complete facade, including all intermediate types. SAP srl can realize any designs and architectural solutions.

Folding crystal glass windows are the ideal solution for the closure of terraces, balconies, verandahs, arcades and gazebo to utilize the potential of the surrounding space.

- They are exploitable for commercial activities (shops, bars, restaurants, hotels) for improving halls, making them bright and elegant.
- They are useful to transform interior spaces of private houses or offices in separate premises. A novelty is the closure of interior spaces used for cupboards or wardrobe.

In addition, other products are proposed, such as the innovative systems for the construction of a "conservatory", fixed and movable covers and the range of sliding glass windows to allow the architect to unleash his creative imagination and to design an infinite number of forms and types.
